

Panel power in Wp. Solar panels are generally rated by their watt peak (Wp) value. When someone refers to their "440 panels", it typically means those panels have a watt peak power output of 440. Peak? A 440 Wp panel would produce ...

$r$  = PV panel efficiency (%)  $A$  = area of PV panel ( $m^2$ ) For example, a PV panel with an area of 1.6  $m^2$ , efficiency of 15% and annual average solar radiation of 1700 kWh/ $m^2$ /year would generate:  
...  $P$  = Peak power from the PV array (kW) ...

The first factor in calculating solar panel output is the power rating. There are mainly 3 different classes of solar panels: Small solar panels: 50W and 100W panels. Standard solar panels: 200W, 250W, 300W, 350W, 500W panels. ...
