

Aluminum alloy trough for photovoltaic panels

How much aluminium will be used in photovoltaic solar systems?

Consequently, 0.64% of total annual aluminium production will be used in PV systems in decade 2010-2020, which will reach to 1.21% in decade 2020-2030 and 1.63% in period of 2030-2050. Temperature is another important factor in efficiency of the photovoltaic solar systems.

Can aluminum be used for photovoltaics?

In all these applications, however, the success of photovoltaics relies on using aluminum architectural components for both fixed and moving structures. Here, we discuss the benefits and drawbacks of aluminum for applications in the solar power industry as well as some design considerations for framing systems. What Are The Drawbacks?

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.

What materials can be used to build a photovoltaic solar system?

Construction and structure of photovoltaic solar systems are the main part of this system that can be made of aluminium. Steel and aluminium are the most common materials that are used in construction of solar power systems.

Why do solar systems use aluminium instead of steel?

Considering the growth of aluminium usage in solar systems during the last years, however, clarifies that the solar industries prefer to use extruded aluminium instead of steel frames. Consequently, demands for aluminium related to steel will increase in the course of time.

Why is aluminium a preferred material for solar pond?

Because of its recyclability, light weight, high strength and high corrosion resistance, it has become a preferred material. By using aluminium Alcoa is saving on costs of solar pond and transportation. Hydro in Germany is making mirrors for concentrated solar power as well as absorber sheets for solar thermal application.

In all these applications, however, the success of photovoltaics relies on using aluminum architectural components for both fixed and moving structures. Here, we discuss the benefits and drawbacks of aluminum for applications in the ...
