

Application methods of solar power generation

What are the applications of solar energy?

Some of the major application of solar energy are as follows: (a) Solar water heating (b) Solar heating of buildings (c) Solar distillation (d) Solar pumping (e) Solar drying of agricultural and animal products (f) Solar furnaces (g) Solar cooking (h) Solar electric power generation (i) Solar thermal power production (j) Solar green houses.

What is solar energy conversion & its application methods?

Solar energy conversion and its application methods varies in wide range from passive solar to heat building to complex concentrated form to generate electricity. It is crucial to know these structures in detail and to classify them in methodical order. The constituent mechanism of primary energy sources have been briefly mentioned.

What technologies are used to convert solar energy into electricity?

An array of techniques is used to convert the Sun's energy into electricity, including solar collectors and photovoltaic panels. Technologies related to solar photovoltaic panels and concentrated solar power also described its applications in various disciplines.

What are the different types of photovoltaic power generation applications?

The majority of photovoltaic power generation applications are remote, off-grid applications. These include communication satellites, terrestrial communication sites, remote homes and villages, and water pumps. These are sometimes hybrid systems that include an engine-driven generator to charge batteries when solar power is insufficient.

What has been done in solar power generation & application?

Substantial progress has been made in the area of solar power generation and application covering analysis, simulation, and hardware development and testing for efficiency maximization and cost minimization.

How can solar energy be harvested?

Harvesting energy through solar is made feasible through following technologies categories into a) Photovoltaic (PV) solar; b) Concentrated Solar Power (CSP's); c) Solar Heating and Cooling.
