

Are solar photovoltaic panels necessary

Do you need a solar panel system?

You'll likely still rely on utility-produced electricity at times, but far less than you would without a solar panel system. The energy independence you gain by going solar insulates you from tumultuous electricity costs: Over the past decade, electricity prices have increased 2.8% annually on average!

Why should you install a solar energy system?

Solar panels draw their energy from the renewable resource that is our sun. Not only does installing a solar energy system reduce your reliance on fossil fuels(which improves your air quality and protects the environment),but it can also save you \$25,000 to over \$110,000 over its lifetime.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels,and panels can be grouped into arrays of different sizes to power water pumps,power individual homes,or provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted)

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell,commonly called a solar cell,is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons,or particles of solar energy.

Are solar panels a good option for homeowners?

Fortunately for the solar-curious, many options exist for homeowners and even renters to get some or most of their electricity needs met with energy from the sun. The most common way to go solar for homeowners is the installation of panels on their roofs.

Do solar panels save money?

Multiple solar panels connected together to form a solar array,also known as a PV system. Solar installers usually mount the solar array on your roof,but are also available. Homeowners do save moneyand help the environment when they use the sun's energy to power their homes. These aren't the only benefits of solar,though.

Solar panels do not need direct sunlight to work. Most rooftop solar panels start producing electricity shortly after sunrise on a clear day. However, the amount of power produced by a solar panel is closely related to the amount of sunlight ...
