

Bowei distribution network construction fee reduced

What should the Chinese government do to improve broadband infrastructure?

For example, the Chinese government needs to expedite network infrastructure construction and continue to implement the BCP. It should promote public understanding of the value of network infrastructure, hasten the development of broadband networks, and boost rates of broadband access and network penetration.

Do network infrastructure construction and digital financial inclusion affect UR_{it} ?

In the third column, the coefficients of the influence of network infrastructure construction and digital financial inclusion on UR_{it} both pass the significance test at the 1 % level.

Does network infrastructure reduce UR_{it} ?

The regression results show that the DID coefficients are negative in both subsamples, which again indicates that the construction of network infrastructure has reduced UR_{it} at different administrative levels of cities. However, only the DID coefficients for the low-administrative-level cities passed the 5 % significance test.

How to test UR_{it} based on network infrastructure construction?

The specific testing steps are as follows: Step 1: Establish regression equations for the impact of network infrastructure construction on UR_{it} , the impact of network infrastructure construction on digital financial inclusion, and the impact of network infrastructure construction and digital financial inclusion on UR_{it} .

How much does a distribution network cost?

Typically, distribution and transportation costs for consumer packaged goods companies range from 6% to 8% of revenues (see Figure 1). In our experience, companies with inefficient networks can lower their distribution network costs by 10% to 25% by upgrading their systems (see Figure 2).

How does digital financial inclusion affect UR_{it} in China?

On the other hand, the development of digital financial inclusion in China has reduced UR_{it} , which is mainly reflected in the impact of digitalization and other aspects. Digital finance is closely related to network infrastructure, in line with the development of modern service industries such as online banking, and plays a role in the BCP.
