

China's fourth solar thermal power generation

How does China use solar energy?

China's initiative in solar thermal energy storage utilizes multiple towers, with two of them sharing a common turbine. This design optimizes the efficiency of solar thermal power generation by strategically positioning mirrors in overlapping concentric circles to maximize sunlight reflection. How can solar energy be utilized after sunset?

Where is China's largest molten salt solar power plant located?

China's largest molten salt solar thermal power plant is situated in Dunhuang, northwest China's Gansu Province. By receiving sunlight and heating up the molten salt, it can constantly generate electricity. The power station generates 390 million kilowatts of electricity per year, reducing carbon dioxide emissions by 350,000 tonnes.

How big is China's solar power plant?

The plant covers an area of 33,000 acres (200,000 Chinese mu) and is reported to have an output of 6.09 billion kWh annually. Data released by China's National Agency in January revealed that the country's solar electric power generation capacity grew by a staggering 55.2 percent in 2023.

How many kilowatts does China have?

Amid the country's efforts to accelerate the development of wind power and solar power, the combined power generation capacity of the two has topped one billion kilowatts, maintaining a major share in the country's newly installed power generation capacity, according to the administration.

What is a twin tower solar power project?

The project's twin tower configuration and adaptable mirror array are poised to enhance solar thermal power generation efficiency and reliability. Anticipated annual output is 1.8 billion kilowatt hours, contributing to a reduction of 1.53 million tons of carbon dioxide emissions annually.

How much solar power does China have in 2023?

Data released by China's National Agency in January revealed that the country's solar electric power generation capacity grew by a staggering 55.2 percent in 2023. The numbers highlight over 216 gigawatts (GW) of solar power China built during the year. That's more than the United States' entire solar fleet.
