

Colorful lights can be powered by solar panels

There are two possible reasons. One reason is the solar panel being broken. The other reason is the controller being board broken. If solar lights can still light for several days, it means the solar panel can still charge energy. ...

Yes, LED lights are able to power solar panels! The type of light that LEDs emit is very similar to sunlight (which is why it's also good for plants! How effective the LEDs are at powering solar panels depends on the type of bulb and color ...
