

DC lightning protection combiner box photovoltaic power generation

What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I, V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

What is a combiner box in a photovoltaic system?

In a photovoltaic system, a combiner box acts as a central hub that consolidates and manages the direct current (DC) output of multiple solar panels. Its main purpose is to simplify the wiring structure, enhance system security and simplify maintenance procedures.

Should solar combiner boxes have surge protection?

Photovoltaic (PV) Solar Combiner Boxes should have surge protection features to avoid impacts from thunderstorms on entire solar energy systems. In on-grid systems, solar combiner boxes should have reverse flow protection features preventing current flowing back into grid causing harm.

What are the advantages of a DC combination box?

Main Advantages Enhanced Safety: DC Combiner boxes are equipped with overcurrent protection, surge protection, and other protective functions, ensuring that PV systems are protected against overcurrent, lightning strikes, or voltage fluctuations.

What is a sunclix combiner box?

With surge protection (type 1/2) and SUNCLIX DC connectors for the input and output side (SUNCLIX mating connectors supplied as standard). String combiner box for photovoltaic systems up to 1000 V DC for connecting 4x 2 strings. Same number of input and output strings. With surge protection (type 1/2) and cable glands for the input and output side.

Where should a lightning protector be located in a combiner box?

Positioned at the combiner box's output end, a lightning protector is essential for both poles. It should meet specific criteria, including a maximum continuous operating voltage and discharge current. Additionally, it should have a disconnect and indicate faults.

2 string solar pv combiner box, 2 in 2 out, max voltage 1000V, max current output 30A, degree of protection IP65. Build-in TUV listed DC switchgears, over-voltage, over-load, lightning protection; real-time detection, long-distance communication.
