

# Distributed solar power generation roof

Do integrated rooftop solar photovoltaic systems contribute to decentralised power generation?

The building integrated rooftop solar photovoltaic (PV) systems, contribute significantly to the decentralised power generation. In this study a detailed analysis of the new distributed power generation policy from roof top PV systems, in India, is carried out along with identifying policy interventions required for its successful implementation.

What is distributed solar photovoltaics (PV)?

Distributed solar photovoltaics (PV) are systems that typically are sited on rooftops, but have less than 1 megawatt of capacity. This solution replaces conventional electricity-generating technologies such as coal, oil, and natural gas power plants. In a PV system, a solar cell turns energy from the sun into electricity.

Does DTE Energy install solar?

While DTE Energy does not install solar or other renewable energy generation systems for our customers, we have an important role to play in connecting your private generation system to the grid. The Rider 18 Distributed Generation Program is available to DTE customers with qualified renewable energy on-site generation.

How to enhance power generation from roof top systems in building sector?

Policy interventions for enhancing power generation from roof top systems, are identified. A strategy to enhance PV industry growth in building sector is presented. The building integrated rooftop solar photovoltaic (PV) systems, contribute significantly to the decentralised power generation.

How does a roof affect solar energy?

Your geographic location, the pitch of your roof and the direction your home faces all impact how much solar energy you can harvest. Long periods of shade can affect electricity generation. Trees, chimneys and other buildings can make some rooftops a less-than-ideal place for solar panels.

Can roof top PV power generation be implemented in India?

As a case study, the implementation of roof top PV power generation in India is presented which faces a number of challenges including resistance from energy distribution companies (DISCOMs). The electricity tariff analysis is also carried out, to suggest corrective measures.
