

Do you need to drill holes in the front and rear columns of the photovoltaic bracket

How do I install a PDI plate?

Will probably get a bracket from autozone, drill 4 new holes and mount it some bolts from behind. Holes might come in useful to slide the bolts through the pilot holes from the rear. Toyota suggests to use self-tapping screws to mount plates. I see most dealers just use whatever and drill pilot holes first - against what the Toyota PDI guide says.

How do you install a split column wall?

Drill six holes in the column wall at the points where the screws will line up with the blocks installed in step three. Holes should be countersunk so that the head of the screw will be slightly below the surface of the column wall. 5. Place the split column in position and fasten it to the wood blocks. Screws should be snug.

How many holes does a rear plate holder need?

Original owners state was rear plate only. Looking at the OE holder, seems to require 5 holes. Most holders just need a pilot hole and the screws hold it on. This holder has sort of a plastic molly/ anchor thing going on. Screw expands the anchor. Went through this exact issue. OE from plate bracket is angled, to fit the bumper perfectly.

How do you attach a splash board to a precast concrete column?

Position the splash board against the precast concrete column, predrill a 3/16-inch diameter hole through the splash board and 2 inches into the concrete, then drive a split-drive anchor to attach. Stainless-steel drive anchors are required for highly corrosive wood treatments. How deep in the ground should I place Perma-Column®; precast columns?

Can a column be drilled?

A drainage hole can be drilled in the bottom of the shaft and plinth if necessary. Columns should never be pressure washed or sprayed with water prior to installation. Columns are not designed to be used in freestanding applications. A structural support inside the column must be used. Columns are not designed to be set in masonry.

How do you attach a neck mold to a fiberglass column?

or a DuraLite(TM) Square Fiberglass Column, slide the neck mold over top of shaft to desired location before sliding capital over. Fasten neck mold to shaft using construction adhesive and non-corrosive screws. 5. 5. Slide base/plinth onto column shaft from bottom. 6.
