

Double row photovoltaic bracket installation method

Can a racking system be used to ground a PV module?

This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions. The system is a non-separately derived system.

How do I attach a module to a bracket?

Apply bolts to fix modules on the bracket through mounting holes on the back frame. See details in Figure 3. In the figure, A represents the permissible overlap distance between the module frame and bracket. Table 5 lists the recommended bolts and associated accessories for use when connecting brackets to the modules.

How do I connect a solar stack module to a pedestal?

Modules should be bonded to the Solar Stack pedestals with the manufacturer approved middle/end clamps. Grounding hardware (as a part of the module clamps) forms secure electrical bonds with both the module and the pedestal, resulting in many parallel grounding paths throughout the system.

Do PV modules need to be connected to ground?

PV module installation site is exposed to long-term humid conditions such as floating PV system. To reduce the risk of PID, on the modules DC connection site, it is recommended to connect the negative to ground. As part of the module design, an anodized corrosion-resistant aluminum alloy frame is used to provide rigidity.

How do you attach a PV module to a rail?

Module Clamp: Secures the PV module to the rail. Use four clamps for each Ballast Tray, two on north and south two Ballast Trays. Multiple sizes available depending on thickness of PV module. **Wind Deflector:** Joins Ballast Trays together into a continuous structural member. Distributes and reduces loading on roof structure.

How do solar panels attach to a roof?

The most common roof mounted structure of all. Consists of attaching a set of rails to the rooftop. Each solar panel is then attached to the rails through a set of clamps. The rails are secured to the rooftop by screws and bolts. This type of installation directly uses bolts and screws to secure each panel to the roof.

Flexible panel installation. Meet the needs of PV modules in horizontal or vertical rows. Single and double rows, adjustable structure. Single-row and double-row installation methods can be freely selected, and the adjustable structure ...
