

# Feasibility analysis of photovoltaic energy storage power station

Are grid connected photovoltaic plants with battery energy storage feasible?

Grid connected Photovoltaic (PV) plants with battery energy storage system, are being increasingly utilised worldwide for grid stability and sustainable electricity supplies. In this context, a comprehensive feasibility analysis of a grid connected photovoltaic plant with energy storage, is presented as a case study in India.

What factors drive the financial feasibility of DPS KP-V solar plant?

Comparative results of five different solar plant configuration options along with financial analysis for DPS KP-V. Life cycle cost-benefit analysis for five different pairs of PV +BESS shows that the BESS capacity and availability of net metering provision are the two main factors driving the financial feasibility.

What are the main objectives of battery energy storage system integrated with PV plants?

The main objectives of using battery energy storage system integrated with PV plants are as follows: To maximize the captive power utilisation of PV plants by stabilising the PV power output. To minimise the use of Diesel generator (DG) sets by supplying power during power outages.

Are solar plants economically feasible?

However, the techno-economic feasibility of such solar plants, depends on the site constraints, grid power supply conditions and prevalent electricity regulatory framework of any country.

How reliable is a PV plant with energy storage?

The PV plant with energy storage has excellent economic performance and poor reliability, and the system with only a battery and that with only the TES can achieve an LCOE of less than 0.155 USD/kWh.

Can a PV + Bess system save grid electricity?

The results show the technical feasibility and economic viability of a PV +BESS system to save grid electricity, peak demand management and backup power supply during power outages for an institutional electricity consumer. A similar approach can be followed to study the feasibility of such systems in other medium and large electricity consumers.
