

Fish pond photovoltaic power generation bracket installation diagram

What is a fishing and light complementary photovoltaic power station?

Project Content: The fishing and light complementary photovoltaic power station uses the vast area of the fish pond to install solar panels on it to generate electricity. The photovoltaic modules are three-dimensionally arranged above the water surface.

Does fishery complementary photovoltaic (FPV) power plant affect radiation and energy flux?

Meanwhile, the underlying surface of PV in land is significantly different from those in lake. The fishery complementary photovoltaic (FPV) power plant is a new type of using solar energy by PV power plant in China. The studies of the impact of FPV on the balance of both radiation and energy flux have been less presenting.

Are fishery complementary photovoltaic power plants a new surface type?

The deployment of photovoltaic arrays on the lake has formed a new underlying surface type. But the new underlying surface is different from the natural lake. The impact of fishery complementary photovoltaic (FPV) power plants on the radiation, energy flux, and driving force is unclear.

What are the coordinates of the fishery complementary photovoltaic demonstration base?

The central coordinates of study area 32°17'55" N, 119°47'39" E, and the altitude is 2 m. The fishery complementary photovoltaic demonstration base is composed of four ponds of 5.7-8.9 acre. The FPV is located on the central the pond with about the water depth from 2.5 m to 3 m.

Can solar aerator be used as a power source for fish pond?

The solar energy is used as the power of the aerator in the solar aerator for fish pond to provide sufficient oxygen for fishes in pond, which meets the needs of general aquaculture. In this paper, solar energy is used as the power source of aerator, and weak current DC aerator replaces the traditional existing strong alternating aerator.

Can floating solar panels be used to cover fish ponds?

Numerous studies have developed mathematical models of fish pond ecosystems (Piedrahita et al., 1984; Svirezhev et al., 1984; Wolfe et al., 1986; Li and Yakupitiyage, 2003; Zhang et al., 2017; Granada et al., 2018), but to our knowledge, the ecological effects of covering fish ponds with floating solar panels have not yet been studied.
