

Is solar photovoltaics ready for the future?

Solar photovoltaics (PV) is a mature technology ready to contribute to this challenge. Throughout the last decade, a higher capacity of solar PV was installed globally than any other power-generation technology and cumulative capacity at the end of 2019 accounted for more than 600 GW.

Are solar PV installations eligible for government rebates?

Once accredited with the Clean Energy Council, solar PV installations are eligible for government rebates such as Small-scale Technology Certificates and feed-in tariffs.

How many GW of photovoltaic installations are there in the world?

As a result of sustained investment and continual innovation in technology, project financing, and execution, over 100 MW of new photovoltaic (PV) installation is being added to global installed capacity every day since 2013, which resulted in the present global installed capacity of approximately 655 GW (refer Fig. 1).

Why is photovoltaic power generation unstable?

However, photovoltaic power generation is susceptible to intermittent and unstable power generation due to factors such as climatic features and the alternation of day and night, which leads to difficulties in matching the demand and supply to the grid and poses certain scheduling challenges for the power system.

Who supported the project PV-Tera - reliable and cost efficient photovoltaic power generation?

This work was supported by the Bavarian State Government (project "PV-Tera - Reliable and cost efficient photovoltaic power generation on the terawatt scale," no. 44-6521a/20/5).
