

# Germany's large-scale energy storage system

Where is Germany's largest battery storage facility located?

RWE has begun construction of one of Germany's largest battery storage facilities at its power plant locations in Neurath and Hamm. The facility will have a capacity of 220 megawatts (MW) and storage capacity of 235 megawatt hours (MWh).

How will Germany's new energy storage system improve energy security?

The project will improve energy security and significantly support Germany's energy transition pathway by increasing the efficiency of the existing grid infrastructure. The 250 MW battery-based energy storage system, supplied by Fluence, will be located at Kupferzell, a major grid hub.

How big will Germany's storage system be by 2030?

The output of large-scale storage systems in Germany is predicted to increase to 15 GW /57 GWh by 2030, driven by sharply falling costs for battery storage and a constantly growing demand for flexibility in the electricity system. This corresponds to a forty-fold growth in the storage capacity compared to today's 1.4 GWh.

Where is eco Stor constructing a battery energy storage system in Germany?

ECO STOR is pleased to announce another significant battery energy storage system (BESS) project in Germany, with construction scheduled for the end of 2024. This new project will be situated in the town of Wittlich in Rhineland-Palatinate, adjacent to the Wengerohr substation, and will be part of ECO STOR's series of large-scale BESS projects.

Does Germany need energy storage?

The need for energy storage is moving up policymakers' agenda. The German government launched a strategy on electricity storage in December 2023. In this context, a study by the leading German energy consultancy, Frontier Economics, offers important evidence on the future role of energy storage for the German power system.

Will large-scale storage increase in Germany by 2050?

According to the study, the volume of large storage in Germany could increase to 60 GW /271 GWh by 2050, proving the importance of large-scale storage for the electricity system in the future.
