

# Ground station photovoltaic bracket installation tutorial

Can a racking system be used to ground a PV module?

This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions. The system is a non-separately derived system.

How do I connect a solar stack module to a pedestal?

Modules should be bonded to the Solar Stack pedestals with the manufacturer approved middle/end clamps. Grounding hardware (as a part of the module clamps) forms secure electrical bonds with both the module and the pedestal, resulting in many parallel grounding paths throughout the system.

How do I install a solar stack module?

Insert the middle clamps and tighten them. Insert the end clamps laterally in the pedestal. The end clamps are attached and then tightened at the height of the module frame. Modules should be installed to the Solar Stack pedestals with the manufacturer approved middle/end clamps.

How do you ground a solar array?

Grounding lugs connect the PV modules to the grounding conductors. Attach the grounding lug to the Solar Stack Pedestal with hardware. Secure the grounding wire to the lug by tightening the set screw and torque Grounding Lug 120 in-lbs. at Pedestal terminal and 5 ft-lbs. at wire terminal. Entire solar array must be grounded.

What are the components of a solar stack pedestal system?

The system is a non-separately derived system. The following components have been evaluated for bonding as the fault current ground path: PV module, Mid Clamp, End Clamp, Pedestal and Ground Lugs. Solar Stack pedestals can be installed on BUR (Build Up Roofing), Mineral surface (Modified Bitumen), EPDM, PVC, TPO, Hypalon and Concrete roofs.

What types of ground mounting systems are available?

Ground mounting systems have a wide variability of choices and are suitable for different customer needs: residential, commercial, industrial and the utility sector. Roof-mounted options are available for residential, commercial and in some cases industrial installations.

$P_{in}$  = Incident solar power (W) If a solar cell produces 150W of power from 1000W of incident solar power:  $E = (150 / 1000) * 100 = 15\%$  37. Payback Period Calculation. The payback period is the time it takes for the savings generated ...
