

Hazards of installing photovoltaic panels

Are solar PV systems dangerous?

However, as with any electrical system, there are potential safety risks that must be considered. In this blog, we will delve into the most common hazards associated with solar PV systems, including electrical shock and fire risks, as well as fall hazards for those working on installations.

Are solar panels a hazard?

The introduction and rapid expansion of solar technology has brought with it a number of occupational hazards for workers responsible for panel installation. Guidelines for safe solar panel installation exist, however the injuries related to panel installation are poorly quantified.

Are Falls a hazard during solar installations?

While falls are a major hazard during solar installations, they are clearly not the only ones to be concerned with. Proper training, planning, PPE usage, and equipment installation need to take place in order to mitigate the dangers associated with this work. Here's an extra safety tip!

Are photovoltaic solar panels safe?

The risks associated with the use of renewables are often overlooked and this poses serious problems for insurers. However, we are keen to support our customers and to provide guidance on how photovoltaic solar panel systems can be installed and used safely.

Are rooftop solar panels a hazard?

As mentioned, falls are probably the first hazard that comes to mind for most people when dealing with solar installation since the work is often done on rooftops. Residential rooftops tend to pose an even greater challenge than large, flat commercial or industrial rooftops because of their slope and lack of fall protection options.

Can photovoltaic panels cause a fire?

Heat buildup can be the catalyst for a fire. It is thus essential to assiduously monitor and regulate the operating temperatures of the photovoltaic panels to obviate thermally induced fires. Ensuring robust heat dissipation and ventilation protocols is essential in diminishing overheating hazards.

With regard to PV occupational safety, there are differing exposures depending on the stage of involvement in Solar energy production. This can be broken down into four stages. Exposures and their impacts on worker health intricately depend on the PV life-cycle stage, as well as depth and duration of system involvement by the individual.
