

What is molten salt storage in concentrating solar power plants?

At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWh el. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power plants and electrical energy storage.

Can molten salts be used to generate concentrated solar power?

Since this book is devoted to molten salt technology, the present chapter focuses on concentrated solar power (CSP) generation using molten salts in sensible and latent heat storage systems (Table 20.1, marked bold; Figure 20.1, marked by two ellipses). Table 20.1. Overview of Salts Utilized in TES Processes

Are molten salt towers the next-generation technology for solar thermal power?

Mark Mehos, thermal systems group manager at the National Renewable Energy Laboratory (NREL), says molten salt towers akin to SolarReserve's are "the next-generation technology" for solar thermal power. Plants without storage may never be able to compete with PV, says Mehos.

Can molten salts be used in solar and nuclear TES?

This review presents potential applications of molten salts in solar and nuclear TES and the factors influencing their performance. Ternary salts (Hitec salt, Hitec XL) are found to be best suited for concentrated solar plants due to their lower melting point and higher efficiency.

Should molten salts be used in thermal energy storage?

These salts are typically low cost, have a large energy storage density, are easily sourced/abundant and their use has a low environmental impact. Implementing molten salts as part of a thermal energy storage system, however, comes with some unique challenges.

Is solar salt a nitrate based molten salt?

o Interaction between liquid and particles. Among nitrate-based molten salts, Solar Salt is the most investigated base fluid. Diffusion of 31.1% with 0.5%wt of silica NP. Other nitrated-based mixtures mentioned enhancements compared to those obtained in the Solar Salt case [94,100-112]. Two different chloride-based NFs have been proposed.
