

How many national-level solar power plants are there

What percentage of electricity is generated by solar power plants?

Solar photovoltaic and solar thermal power plants provided about 4% of total U.S. utility-scale electricity and accounted for 18% of utility-scale electricity generation from renewable sources in 2023. Nearly all solar electric generation was from photovoltaic systems (PV).

How much electricity is generated by solar photovoltaic systems?

EIA estimates that about 0.07 trillion kWh of electricity were generated with small-scale solar photovoltaic systems. Biomass was the source of about 1% of total U.S. utility-scale electricity generation and accounted for 5% of the utility-scale electricity generation from renewable sources in 2023.

Which state produces the most solar power?

In 2023, California accounted for the largest percentage share of total utility-scale solar electricity generation (25%), followed by Texas (17%). California accounted for nearly 40% of total generation from small-scale PV systems. Most small-scale PV systems are installed on or near buildings.

How many kWh does a solar power plant produce?

Total U.S. solar electricity generation increased from about 5 million kWh in 1984 (nearly all from utility-scale, solar thermal-electric power plants) to about 238 billion kWh in 2023.

How many large-scale solar facilities are in the US?

The database currently contains data for nearly 3,700 U.S. large-scale solar facilities across 47 states plus Washington, D.C. that became operational between 1986 and the end of 2021. The database contains nearly 100% of this category of facilities installed during that period.

How many terawatt-hours does solar power generate a year?

In 2023, utility-scale solar power generated 164.5 terawatt-hours (TWh), or 3.9% of electricity in the United States. Total solar generation that year, including estimated small-scale photovoltaic generation, was 238 TWh.

The solar complex consists of 11 power plants that take advantage of the region's high levels of solar radiation. The complex started producing power in September 2017. Pirapora generates enough energy to meet the annual demand of over ...
