\*Includes roof replacement. Before tax credits and incentives. Get free estimates from solar panel installers near you.

How much does it cost to install solar panels?

After solar incentives, the general range is \$10,000 to \$30,000 for an average American household to invest in solar panels. This includes the cost of the panels themselves, installation and any additional equipment needed.

It typically takes five to 15 years to break even on solar installation costs.

Should you install a solar energy system on your roof?

When you install a solar energy system, you're getting more than just solar panels on your roof. Multiple pieces of equipment, such as racking, wiring, and inverters, must be installed so the solar panels can power your home. There are also a number of costs that ensure your system is installed correctly and that the solar company can operate.

How much do solar panels cost per watt?

The average cost per watt for solar panels in the U.S. is \$2.84 for residential systems. High-efficiency monocrystalline panels tend to be at the higher end of the price range, but they generate more power with fewer panels--ideal if you have limited roof space.

How much electricity does a solar roof generate?

A solar roof generates 4 kW to 23 kW or more of electricity, depending on the roof and system size, sun exposure, and weather. Each active solar shingle or tile has a maximum power output of 45 to 80 watts. Hire an experienced solar roof installer near you to ensure your system is eligible for tax credits and rebates.

How much does a solar system cost for a 3,000 square foot home?

The average pre-incentive cost of a solar system for a 3,000 square foot home was \$30,100 based on thousands of sales conducted on solar.com in 2022. The number of panels in these systems depends on the price point from the installer and power rating of each panel. The table below shows a few common scenarios for a 3,000 square foot home.
