

# How to deal with the photovoltaic panel burst

What happens if a solar panel inverter is damaged?

Damage to the inverter or other electrical components can impact the overall functionality of the solar panel system. In such cases, consulting with a qualified electrician or solar professional is crucial to evaluate and repair the damaged components.

Why do solar panels not look damaged by impact?

If energy production is down but solar panels don't look damaged by impact, the problem is most likely within the solar cells themselves. Solar panels are made up of tiny cells that are, in turn, composed of tiny "wafers" made of silicon. Each wafer is under 200 microns thick.

What should I do with salvaged solar panels?

Ensure that the salvaged panel is compatible with the off-grid system, and consult with a solar professional to design an appropriate system layout that maximizes the use of the salvaged panel's output. Consider donating or reselling still functional panels to others in need.

Locate your main electrical panel or circuit breaker box and switch off the circuit that supplies power to the impacted area. This precaution helps reduce the risk of electrical shock or fire and should not be overlooked when dealing with burst ...

In the event of a solar panel fire, you can follow these steps to prioritize safety and take immediate action. Contact firefighters and evacuate the area, maintaining a safe distance. Never attempt to extinguish the fire yourself ...
