

How to install the photovoltaic panel snow guard

Should I install snow guards with my new solar panels?

Installing snow guards with your new solar panels will save you a lot of money and headache. Snow guards are easy to install and are a great addition when the installer is already up on your roof and the solar panels are clean. Installing the snow guards is simply an extra step.

How much does a snow guard cost for solar panels?

The installation of snow guards for solar panels varies widely depending on the style you choose, the size of your roof, and the number of solar panels you install. The average snow guard runs \$1.50-\$3.00 per foot with additional costs added for installation, which can be quite a bit extra.

Why is a snow guard necessary for solar panels?

A solar panel's snow guard allows snow and ice to melt slowly and fall off your roof like it normally would. Solar panels are an incredibly smooth glass surface, compared to the roof type and shingles you have, which can make a better place for snow to stick.

How do I protect my solar panels from snow?

Installing a Pulley-Operated Tarp: A tarp system above your panels can be pulled over during snowfall to protect them. Considering a Heating System: Install a heating system designed for solar panels to melt snow and ensure optimal performance in winter. Prioritize safety and consult professionals for assistance.

Does ColorGuard work on solar panels?

ColorGuard by S-5! uses round-point screws for a penetration-free clamp that grips the solar panel securely and without damaging the finish of the panel. These snow guards are designed to seamlessly match the color and finish of your existing roof for an attractive look that won't fade for at least 30 years.

What is the best snow fence for solar panels?

The Snow Fence by Rocky Mountain Snow Guards is the most popular snow fence available. This snow fence is installed at the eave of your roof and bolted down to collect snow as it slides off the solar panels. Because they need a snow collection area, the Snow Fence requires a minimum of 18-24 inches between the lowest solar panel and the roof eave.

If you live in an area where snow is expected in the winter, you should consider installing snow guards on your solar carport. As snow falls, it accumulates on the solar panels. The longer the snow covers your panels, the less electricity they ...
