

How to test the light transmittance of photovoltaic panels

The spectral transmittance is obtained by measuring the transmittance of 3 mm-thick glass with film attached to one face. For these tests, we determined the visible light transmittance, UV transmittance, solar transmittance, solar ...

When a manufacturer wants to test their new solar panels, the IEC creates these test conditions in a laboratory, puts the solar panels under that 1000 W/m² light, and measures the solar panel output. Here is an example of the specs the ...
