How to turn off the power of photovoltaic inverter

How do I Turn Off my solar power inverter?
Go to your switchboard and open it. Locate the solar supply main switch and flick the switch to the off position. If your solar power inverter is more than 3 metres away from your switchboard,you must locate the switch marked,solar AC isolator. This will be located next to your inverter.

How do you turn a solar inverter back on?
Simply do all the procedure in reverse. Start with turning on the DC side and then turning on the AC side. If it happens that your inverter does not come online again, you will need to call your solar installer. The steps that we have just explained refer to all PV systems.

How do I turn off a PV array & DC isolator?
Go to your inverter and find the switch marked PV Array and DC Isolator. Flick this switch to the off position(in some cases there will be two switches). Your inverter may have a switch marked Inverter Isolator. If it does,flick this switch to the off position. If you cannot locate this switch on your inverter,skip this step.

How do you turn off a PV system?
Once you have turned off the AC side,turn off the DC breaker or switch,generally located in the combiner box of your system. Now your whole PV system is turned off,since this will stop the flow of current to the inverter. Your system will now be safe to work on. Simply do all the procedure in reverse.

How do I remove a switch from my inverter?
If your inverter and switchboard are within 3 metres of each other, disregard this step. Go to your inverter and find the switch marked PV Array and DC Isolator. Flick this switch to the off position (in some cases there will be two switches). Your inverter may have a switch marked Inverter Isolator.

How to switch off inverter when not in use?
To know how to switch off inverter when not in use you have two options. The first option is through the bypassby using the bypass switch on the back of the inverter. Then,on the front side of the inverter,you will find the on/off button which is required to press and hold button until the inverter is switched off.

A DC power source: This could be a car battery, a solar power system, or a portable power station. 2. Connection cables: These cables connect the inverter to the power source. Most inverters come with these, but always make sure to ...
