

What is solar photovoltaics (PV)?

Renewable energy is a predominant term in carbon-neutral roadmaps for every country, and solar photovoltaics (PV) is currently the most affordable, accessible and prevalent technology. It involves the generation of electricity from sunlight shining through the front cover onto solar cells packaged into a solar module.

How to extract PV panel area from crystalline silicon photovoltaic modules?

Both studies demonstrated that accurate PV panels area can be extracted using red, green, and blue band images. Therefore, we used RGB band information to extract PV panel information. The core part of crystalline silicon photovoltaic modules is the solar cell, which mostly appears in a deep blue color to enhance the absorption of sunlight [37].

What is solar PV & how does it work?

It involves the generation of electricity from sunlight shining through the front cover onto solar cells packaged into a solar module. As of May 2022, global PV installations have reached 1 TW. In the PV market, crystalline-Si (c-Si) solar cells account for 95% and thin film solar cells account for 5% [2].

How are PV solar cells made?

The manufacturing process of PV solar cells necessitates specialized equipment, each contributing significantly to the final product's quality and efficiency: Silicon Ingot and Wafer Manufacturing Tools: These transform raw silicon into crystalline ingots and then slice them into thin wafers, forming the substrate of the solar cells.

What are the parameters of a solar photovoltaic subsystem?

The detailed parameters are shown in Table 1. Solar photovoltaic subsystem: The "solar photovoltaic" spectral band energy is concentrated on the surface of the photovoltaic panel to excite and generate electron-hole pairs. Incident spectral energy is converted into electricity.

What is deep solar PV refiner?

You, L.; Heo, J.; et al. Deep solar PV refiner: A detail-oriented deep learning network for refined segmentation of photovoltaic areas from satellite imagery. Int. J. Appl. Earth Obs. Geoinf. 2023, 116, 103134. [Google Scholar] [CrossRef] Kirillov, A.; Wu, Y.; He, K.; Girshick, R. PointRend: Image Segmentation as Rendering.
