

Installation requirements for track-mounted photovoltaic panels

Can a rooftop solar PV system be installed on a building?

The vast majority of rooftop solar PV systems are installed on existing structures. Even though very few of these buildings were constructed specifically for installing solar equipment, many of them are well suited for PV systems.

What should be included in a solar PV installation checklist?

The checklist does not need to take the exact form of this template, but it should include the basic information an installer, developer, or property owner would need to know in order to receive approval for the installation of a residential solar PV system.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

Do you need a roof access point for a solar PV system?

Solar installations must also allow for fire department smoke ventilation operations. The International Building, Residential, and Fire Codes outline the requirements for a roof access point and clear access points along the roof. The installation of solar PV systems may be subject to additional provisions adopted by the local enforcing agency.

What are the requirements for ground-mounted photovoltaic panels?

Ground-mounted photovoltaic panel systems shall comply with Section CS512.1 (IFC 1204.1) and this section. Setback requirements shall not apply to ground-mounted, free-standing photovoltaic arrays. A clear, brush-free area of 10 feet (3048 mm) shall be required for ground-mounted photovoltaic arrays. CS512.5 (IFC 1204.5) Buildings with rapid shutdown.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof-mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.
