

# Kazakhstan wind turbine generators

How many wind power plants are there in Kazakhstan?

Currently only one wind energy plant is operating in Kazakhstan; the Kordai wind power plant with 1500 kW capacity was launched in December 2011 in Zhambyl region. One of Kazakhstan's power companies, Samruk-Energy JSC, was recently awarded a \$94 million loan from the Eurasian Development Bank to build Kazakhstan's largest wind farm.

Does Kazakhstan have a wind farm?

One of Kazakhstan's power companies, Samruk-Energy JSC, was recently awarded a \$94 million loan from the Eurasian Development Bank to build Kazakhstan's largest wind farm. The project will produce 172 million kilowatt-hours of electrical energy per year, save more than 60 million tons of coal, and reduce emissions of greenhouse gases.

Which region in Kazakhstan has the best wind power?

About 50% of Kazakhstan's territory has average wind speeds suitable for energy generation (4-6 m/s) with the strongest potential in the Caspian Sea, central and northern regions.

Does Kazakhstan have a wind energy development program?

Wind Power: For the development of wind energy potential, the Government of Kazakhstan, with the support of the United Nations Development Program, has developed a program of wind energy development thru 2030. The framework of this program provides for the implementation of wind farm construction with the introduction of 2,000 MW by 2030.

What is Zhanatas wind farm?

The 100-MW Zhanatas wind farm is one of the first batch of key energy projects under the China-Kazakhstan production capacity cooperation framework. The project was put into operation in June 2021, becoming Central Asia's largest wind farm at that time, greatly alleviating the power shortage in southern Kazakhstan.

What is the average wind speed in Kazakhstan?

Moreover, the results of the "Kazakhstan - Initiative of Wind Power Market Development" project have shown that the average wind speed of 5-6 m/s suitable for the successful implementation of wind power plant projects is present across the country (Antonov, 2014).

For the period of 2013-2017, the generation of wind energy in Kazakhstan has skyrocketed. In 2017, wind power facilities generated over 300 MWh, 100 times more compared to 2013. As of 2018, three wind power plants (67.6 MW total ...
