

Lightning protection for wind turbine generators

Lightning protection systems for wind turbines are based on International Electrotechnical Commission (IEC) IEC 61400-24. According to this standard, the lightning protection levels (LPLs) have been set in accordance with the ...

Lightning Protection Systems are installed to safeguard your wind turbines in the event that they are struck by lightning, as the LPS technology discharges electrical current, allowing the current to pass through a receptor to the earth, ...

The general and special requirements for wind power industry applications need to meet the requirements of standards IEC 61400-24, which provide requirements for protection of blades, other structural components, and the effects of direct ...
