

Microgrid power generation price

How much does a microgrid cost per megawatt?

The community microgrid market has a mean cost of \$2.1 million per megawatt of DERs installed.

What is a microgrid cost model?

The National Renewable Energy Laboratory was commissioned by the U.S. Department of Energy to complete a microgrid cost study and develop a microgrid cost model. The goal of this study is to elucidate the variables that have the highest impact on costs as well as potential areas for cost reduction. This study consists of two phases.

How much does energy storage cost a microgrid?

In commercial and industrial microgrids, energy storage represents 15% and 25% of the total costs per megawatt, respectively. In commercial microgrids, soft costs account for 43%, while in community microgrids they account for 24%.

How much does a microgrid controller cost?

Controller costs per megawatt range from \$3,500/MW to nearly \$600,000/MW (excluding outliers), with a mean of \$85,000/MW. The analysis shows that controller costs as a percentage of total microgrid costs are relatively similar among the projects in our database and the NY Prize data despite the wide variety of system sizes, types, and uses.

What percentage of microgrid costs are soft costs?

Soft costs, which include interconnection, financing, engineering, procurement, and construction management, range from 0.4%-1.6% of total microgrid costs, as shown in Figure 24. Figure 25 shows the total percentage of soft costs in relation to total microgrid costs.

How much new generation is needed for microgrids?

On average, 64% new generation is called for in the winners of the Stage 1 competition. This is slightly less than the average of 71% new generation for microgrids in the community segment in the NREL cost database.
