

# New energy accelerates wind resistance power generation

Will wind power be a powerful boost to achieve "dual carbon" goals?

In summary, wind power, PV power and other new energy power generations will become a powerful boost to achieve "dual carbon" goals, striving to achieve carbon peaks in 2030 and carbon neutrality in 2060. The utilization of new energy with large scale is a recognized development trend.

Can new wind power energy help alleviate the human survival crisis?

The development and utilization of new wind power energy can effectively alleviate the human survival crisis caused by the shortage of coal resources. The article adopts the development status of wind power new energy, and the current development status of grid-connected technology is explored, hoping to help our country's sustainable development.

What is a comparative study based analysis of wind power generation?

Comparative study-based analysis of various technologies of wind power generation, limitations, and future scope of wind energy. The study aims to make the researcher aware of the latest technologies in use and among them which will be more reliable as an energy source and their application.

How can the wind power industry overcome the challenges?

The wind power business has been dealing with the challenges of increasing generation and efficiency with reduced costs. The area requires a united effort both from the public and private sectors to overcome these challenges. Fundamental research on such growing technologies needs to be rigorously increased. Some points to note are,

What is the power-use efficiency of PV and wind power plants?

By considering the flexible power load with UHV and energy storage, the power-use efficiency for PV and wind power plants is estimated when the electrification rate in 2060 increases from 0 to 20%, 40%, 60%, 80% and 100% (a) and the power generation by other renewables in 2060 increases from 0 to 2, 4, 6, 8 and 10 PWh year<sup>-1</sup> (b).

Is wind power a cost-effective source of energy?

Power generation capability is low compared to conventional sources like thermal power plants. With the development of wind technologies, it will come out to be the most cost-effective source of energy for electrical power.
