

What is offshore solar?

RWE has more than 20 years' experience in the construction and operation of solar power plants. Offshore solar has the potential to be an exciting evolution of onshore and lake-based technology and opens a new door to gigawatt-scale solar energy generation, particularly for markets who are experiencing the challenge of land scarcity.

How does offshore solar work?

Offshore solar uses similar technology to land-based solar but the modules and inverters are mounted on floating substructures and are secured to the seabed with mooring lines and anchors. The generated electricity is transmitted to shore via subsea cables.

Can offshore solar photovoltaics deliver cost competitive energy to net zero?

You bet! RWE is now exploring the prospects for stand-alone and hybrid offshore solar photovoltaics to offer new ways to deliver cost competitive energy in our journey to Net Zero. RWE has more than 20 years' experience in the construction and operation of solar power plants.

What is a collaborative framework on Ocean Energy / offshore renewables?

A new Collaborative Framework on Ocean Energy / Offshore Renewables brings countries together to identify priority areas and actions and to foster international collaboration to understand the role of ocean and offshore renewables in the energy transition and ensure its widespread deployment in the future.

Can a simulation tool predict offshore PV installations?

Developed by scientists in Malta, the tool is said to predict yield gains or losses that waves can determine in offshore PV installations. The research group identified three movements an offshore array can be subject to, and for each of them provided specific measurements. The simulation tool is applicable to any offshore PV project.

Can FPVS be used as a 'Ocean hybrid platform'?

The concept of the "ocean hybrid platform" proposed by SINN POWER (Fig. 8 (b)) integrates wind, solar, and wave energy, which has been produced and tested. FPVs could also be integrated into the sheltering structures of ports, providing power and offering shelter (Claus and Lopez, 2022). Fig. 8.
