

What is solar photovoltaic bracket?

Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. The related products of the solar support system are made of carbon steel and stainless steel.

What types of solar photovoltaic brackets are used in China?

At present, the solar photovoltaic brackets commonly used in China are divided into three types: concrete brackets, steel brackets and aluminum alloy brackets. Concrete supports are mainly used in large-scale photovoltaic power stations. Because of their self-weight, they can only be placed in the field and in areas with good foundations.

What is the best material for a PV bracket?

This characteristic makes aluminum a suitable choice for PV installations in coastal areas or locations with high humidity. At present, the main anti-corrosion method of the bracket is hot-dip galvanized steel with a thickness of 55-80 mm, and aluminum alloy with anodic oxidation with a thickness of 5-10 mm.

What are the technical difficulties in assembling section steel brackets?

In short, there are many technical difficulties in the production process of the assembled section steel bracket, which requires metallurgical engineering and technical personnel to overcome technical barriers and further reduce its use cost.

An enhanced version of the original PVKIT rail-less, solar mounting solution for metal roofs, PVKIT HUR 2.0 (High Uplift Resistance) is a first-of-its-kind PV mounting system specifically designed for high wind uplift performance of ...

Solar PV bracket design: Good weather resistance, the use of high wear-resistant sheet material to resist wind and snow loads and other corrosive effect. Utilization of anodized aluminum, extra-thick galvanized steel, stainless steel, anti-aging ...
