

# Photovoltaic combiner box maintenance and repair training

What is a combiner box in a photovoltaic system?

In a photovoltaic system, a combiner box acts as a central hub that consolidates and manages the direct current (DC) output of multiple solar panels. Its main purpose is to simplify the wiring structure, enhance system security and simplify maintenance procedures.

Do I need a general inspection on the PV AC combiner box?

It is recommended to carry out a general inspection on the PV AC combiner box and the status of the installation before commencing operation. The installation must comply with either local and international regulations. All cables are in good condition. There are no hazards around the installation that could create any damage.

What is a solar combiner box?

The combiner box is equipped with input terminals connected to the DC output of the individual solar panels. These terminals are designed to accommodate the positive and negative wires from each panel.

Do PV AC combiner boxes have a switch disconnecter?

PV AC combiner boxes have an AC switch disconnecter as an optional component. The AC voltage of the switch depends on the voltage of the associated PV string inverters. The switch disconnecter (according to the IEC 60947-3) has been selected to assure that it can switch the circuit at full load at the maximum operating temperature.

What are PV AC combiner boxes made of?

The enclosures of all PV AC combiner boxes are made of Glass Fibre Reinforced Polyester (GFRP). They provide IP65 and IK07 or higher in accordance with IEC 62208. Each enclosure is equipped with hinged door(s). Different enclosure sizes and shape (landscape or portrait) may be used depending on each project configuration and power dissipation needs.

Why do you need a combiner box?

When performing maintenance or troubleshooting, combiner boxes simplify the process by providing a centralized location for monitoring and accessing the DC circuit. This reduces downtime and improves the overall operating efficiency of the solar array. Efficiency is the hallmark of any successful solar installation.

Here the technician takes readings at the rear of a solar photovoltaic system panel with a Fluke 393 FC Solar Clamp Meter CAT III 1500 V. Troubleshooting a PV solar photovoltaic system will typically focus on four parts of the system: ...
