

# Photovoltaic fixed bracket and tracking bracket

What are the different types of PV brackets?

At present, there are 3 types of brackets used in most PV power plants: fixed conventional bracket, adjustable tracking bracket and flexible PV bracket. This refers to the mounting system where the orientation, angle, etc. remain unchanged after installation.

Why should you choose a PV bracket?

The choice of bracket directly affects the operational safety, breakage rate and construction investment of PV modules. Choosing the right PV bracket will not only reduce the project cost, but also reduce the post maintenance cost.

What is a flat single axis tracking bracket?

Flat single-axis tracking bracket refers to the bracket form that can track the rotation of the sun around a horizontal axis, usually with the axial direction of north-south. The common tracking angle range is  $\pm 60^\circ$ , and there are also products with a tracking angle range of  $\pm 45^\circ$ .

What is an a-frame solar tracker?

The A-Frame uses a standard I-beam section into the solar tracker system. This allows seamless transition from driven I-beams to the A-Frames, leaving connection hardware the same. The leveling flanges allow for up to 20 in. of height adjustment to keep the A-Frame plumb and level.

What is Solar FlexRack TDP & BalanceTrac?

Solar FlexRack's reliable TDP 2.0 Solar Tracker with BalanceTrac bundles an advanced tracker design with top-tier engineering and project support services to safeguard solar projects from unexpected costs. One of the easiest trackers to install, TDP 2.0 features smart backtracking to reduce row shading & maximize energy yield.

What is PV flexible racking?

PV flexible racking is a kind of large-span PV module support structure fixed at both ends and formed by pre-stressed flexible cable structure. The span of the cable structure is usually between 20 and 40 meters, up to 100 meters.
