

What is the best material for a PV bracket?

This characteristic makes aluminum a suitable choice for PV installations in coastal areas or locations with high humidity. At present, the main anti-corrosion method of the bracket is hot-dip galvanized steel with a thickness of 55-80 mm, and aluminum alloy with anodic oxidation with a thickness of 5-10 mm.

What material is used for solar ground bracket?

SOEASY Solar Ground Bracket Galvanized Aluminum Magnesium chooses zinc-aluminum-magnesium as the material of solar bracket.

Which material should be used for photovoltaic (PV) support structures?

When it comes to selecting the material for photovoltaic (PV) support structures, it generally adopts Q235B steel and aluminum alloy extrusion profile AL6005-T5. Each material has its advantages and considerations, and the choice depends on various factors. Let's compare steel and aluminum for PV support structures:

What is so easy ground mounting system for photovoltaics?

SOEASY Ground Mounting System for Photovoltaics is suitable for the installation of solar energy systems on large ground projects, the main structure material is aluminum which has strong anti-rust and anti-corrosion ability, which is convenient for fast installation but with low cost.
