

# Photovoltaic inverter acceptance report template

What happens if a PV inverter fails?

An insulation failure in a PV system circuit presents dual hazards of fire and lethal electric shock. Insulation failures can also impact the energy production of the system by tripping the GFDI (ground fault detection and interruption) device and taking the inverter offline.

What is a PV inverter?

PV inverters shall be multi-mode DC-to-AC inverters capable of switching between grid-interactive mode and micro-grid (intentional island) mode. The inverters shall comply with the IEEE 1547.4 "Guide for Design, Operation, and Integration of Distributed Resource Island Systems with Electric Power System" standard.

What is a good test voltage for a PV module?

For example, consider a single-ended test of a PV string with Voc of 475V and a PV module maximum system voltage spec of 1000V. Setting the meg tester's test voltage to 500V will keep all points in the circuit below 1000V.

How to evaluate PV system capacity?

A simple method to evaluate the PV system capacity is to determine the nominal DC rating of the system at STC, measure POA irradiance, calculate cell temperature based on module back-side or ambient temperature using Sandia model, and estimate/calculate/determine values for the derate factors familiar to the industry.

What types of electrical plans are included in a PV system?

Electrical Plans, including single-line electrical diagrams showing utility interconnection and all devices comprising the PV system, including, but not limited to: PV arrays, combiner boxes, circuit breakers, disconnect switches, inverters, meters, timers, control devices, and other equipment comprising the complete system.

When should a PV system be tested and accepted?

The PV systems shall be tested and accepted as they are completed. The Contractor shall notify the Government not less than five (5) Business Days prior to the anticipated date of each PV System Acceptance Testing.

STS offers quality inspection and test services directly at the project site to evaluate the state of health of PV plants: Assessment of transportation or installation damage; Assessment of damage due to a weather event; Warranty ...
