

# Photovoltaic inverter assembly

What is a solar panel inverter?

The solar panel inverter is one of the most important components in a PV system. This component converts DC energy generated by solar panels into AC energy at the right voltage for your appliances. The output is a pure sine wave, featuring a 120V AC voltage (U.S.) or 240V AC (Europe).

How do solar inverters work?

Power electronics for PV modules, including power optimizers and inverters, are assembled on electronic circuit boards. This hardware converts direct current (DC) electricity, which is what a solar panel generates, to alternating current (AC) electricity, which the electrical grid uses. Learn more about how inverters work.

How to pair a solar inverter with a PV plant?

In order to couple a solar inverter with a PV plant, it's important to check that a few parameters match among them. Once the photovoltaic string is designed, it's possible to calculate the maximum open-circuit voltage ( $V_{oc,MAX}$ ) on the DC side (according to the IEC standard).

Which inverter is best for solar panels?

String inverters or centralized inverters are the most common option in PV installations, suitable for solar panels wired in series or series-parallel. Centralized inverters convert DC power for the whole string, which is why they are recommended for PV systems not subjected to partial shading.

Are modular inverters a good choice for utility-scale solar PV?

For many years, the utility-scale solar PV market has been dominated by central and string inverters, with each claimed to have their own benefits for utility-scale solar applications. Lately, modular inverters have also entered the scene, claiming to combine the benefits of both string and central inverters.

What is solar inverter based generation?

As more solar systems are added to the grid, more inverters are being connected to the grid than ever before. Inverter-based generation can produce energy at any frequency and does not have the same inertial properties as steam-based generation, because there is no turbine involved.
