## Does a fan need an inverter?

Many kits have extension cords available, so you can move the fan around as needed. If you want to power a fan that uses AC energy, you will need a solar panel with an inverter. Solar panels create DC energy which will burn out the motor on a fan that requires AC energy.

### Do solar fans use DC power?

Solar fans use DC energy, which is ideal since solar panels produce DC power. If you have a solar array at home, a solar inverter inverts the DC power from the solar array into AC power that is safe for household appliances and gadgets. With a solar fan, and they are available as kits, the power flows directly from the solar panel to the fan.
