

Photovoltaic panel bracket requirements and standards

What are the standards for photovoltaics?

There are numerous national and international bodies that set standards for photovoltaics. There are standards for nearly every stage of the PV life cycle, including materials and processes used in the production of PV panels, testing methodologies, performance standards, and design and installation guidelines.

What are the NFPA requirements for solar PV systems?

The electrical portion of solar PV systems shall be installed in accordance with NFPA 70. CS512.2 (IFC 1204.2) Access and pathways. Roof access, pathways, and spacing requirements shall be provided in accordance with Sections CS512.2.1 (IFC 1204.2.1) through CS512.3.3 (IFC 1204.3.3).

What conditions should a roof support a photovoltaic panel system?

Roof structures that support photovoltaic panel systems shall be designed to resist each of the following conditions: 1. Applicable uniform and concentrated roof loads with the photovoltaic panel system dead loads.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

What should be included in a PV mounting system?

PV mounting systems and devices: Devices and systems used for mounting PV modules that are also used to provide grounding of the module frames should be identified for the purpose of grounding solar panels. Adjacent modules: Devices identified and listed for bonding the metal frames of PV modules can bond one panel to an adjacent one.

What are the requirements for ground-mounted photovoltaic panels?

Ground-mounted photovoltaic panel systems shall comply with Section CS512.1 (IFC 1204.1) and this section. Setback requirements shall not apply to groundmounted, free-standing photovoltaic arrays. A clear, brushfree area of 10 feet (3048 mm) shall be required for groundmounted photovoltaic arrays. CS512.5 (IFC 1204.5) Buildings with rapid shutdown.
