

To help you make these calculations for your area and panels, we have designed a Solar Output calculator. ... a 100-watt solar panel can output 0.45 kWh per day if we install it in a very sunny area. Let's confirm that with the Solar Output ...

$r$  = PV panel efficiency (%)  $A$  = area of PV panel (m<sup>2</sup>;) For example, a PV panel with an area of 1.6 m<sup>2</sup>;, efficiency of 15% and annual average solar radiation of 1700 kWh/m<sup>2</sup>/year would generate:  
 $E = 1700 * 0.15 * 1.6 = 408$  kWh/year 2. ...
