

Photovoltaic panel purlin correction method diagram

What is a purlin in a solar panel?

Purlin: Pipes on which solar panel will be fixed. Installed perpendicular on rafter. Front connection leg: Supports and holds the whole structure in a particular angle. Rear updated leg: Supporting and holding the structure in a particular angle. As well as provides an mechanism to change the tilt angle of the structure.

What is the modal damping ratio of a photovoltaic support system?

Additionally,consistently low modal damping ratios were measured,ranging from 1.07 % to 2.99 %. Secondly,modal analysis of the tracking photovoltaic support system was performed using ANSYS v2022 software,resulting in the determination of structural natural frequencies and mode shapes.

Does tracking photovoltaic support system have a modal analysis?

While significant progress has been made by scholars in the exploration of wind pressure distribution,pulsation characteristics,and dynamic response of tracking photovoltaic support system,there is a notable gap in the literaturewhen it comes to modal analysis of tracking photovoltaic support system.

How to evaluate the dynamic response of tracking photovoltaic support system?

To effectively evaluate the dynamic response of tracking photovoltaic support system,it is essential to perform a tracking photovoltaic support systematic modal analysisthat enables a comprehensive understanding of the inherent dynamic characteristics of the structures.

How many pillars does a photovoltaic support system have?

The tracking photovoltaic support system consisted of 10 pillars(including 1 drive pillar),one axis bar,11 shaft rods,52 photovoltaic panels,54 photovoltaic support purlins,driving devices and 9 sliding bearings,and also includes the connection between the frame and its axis bar. Total length was 60.49 m,as shown in Fig. 8.

How can modal testing improve tracking photovoltaic support systems under different tilt angles?

Through field modal testing and finite element modal analysis,this study enables us to obtain dynamic parametersof tracking photovoltaic support systems under different tilt angles,including modes,damping ratios,and vibration patterns.
