Is the solar PV market growing?

The solar PV market has been growing for the past few years. According to solar PV research company PVinsights, worldwide shipments of solar modules in 2011 was around 25 GW, and the shipment year-over-year growth was around 40%. The top five solar module producers in 2011 were: Suntech, First Solar, Yingli, Trina, and Canadian.

Are photovoltaic technologies the future of energy?

Critical challenges, prospects and research priority pathways are highlighted. Photovoltaic (PV) technologies have achieved commercial acceptance, technological maturity and foresee a leading role in the current energy transition to combat the adverse environmental issues posed by fossil fuel-based power generation.

What is a transparent photovoltaic?

Another name for transparent photovoltaics is "translucent photovoltaics" (they transmit half the light that falls on them). Similar to inorganic photovoltaics, organic photovoltaics are also capable of being translucent. Some non-wavelength-selective photovoltaics achieve semi-transparency by spatial segmentation of opaque solar cells.

What are Photovoltaic windows?

Photovoltaic windows are (semi)transparent modules that can be used to replace a number of architectural elements commonly made with glass or similar materials, such as windows and skylights. In addition to producing electric energy, these can create further energy savings due to superior thermal insulation properties and solar radiation control.

When did photovoltaic applications start?

PV applications for buildings began appearing in the 1970s. Aluminum-framed photovoltaic modules were connected to, or mounted on, buildings that were usually in remote areas without access to an electric power grid. In the 1980s photovoltaic module add-ons to roofs began being demonstrated.

Which countries are developing transparent photovoltaic (TPV) technologies?

Nine transparent photovoltaic (TPV) technologies are in various stages of development (Husain et al., 2018). Most of the research, on this subject, has been reported in Japan, Germany, the USA, and India.

At NK Patent Law, we understand the complex challenges in-house counsel, R&D departments, and inventors face in building and managing their renewable energy patent portfolios. From solar energy to wind energy and hydropower to ocean ...

The manufacturer's name, trademark, or other descriptive marking by which the organization responsible for the product can be identified shall be placed on all electrical equipment. Other markings that indicate voltage,
