

What are Solar Plan sets with batteries?

Solar plan sets with batteries include the design, equipment, and installation details necessary to combine solar panels with an energy storage system.

What is a photovoltaic cell?

A photovoltaic cell is the component of a solar panel that converts sunlight into electricity. These cells are typically made of a crystalline silicon wafer. When sunlight hits the silicon, electrons in the cell are energized and begin to move, initiating a flow of electricity.

Why do 72-cell solar panels have higher power output than 60-cell panels?

72-cell panels can have higher wattages and power output than 60-cell panels because of the additional photovoltaic cells, but that's not always the case. In fact, the number of cells in a panel doesn't have a direct correlation to its power output.
