

What is direct driven solar PV water pumping system?

Direct driven solar PV water pumping system is shown in Fig. 4. In this system, electricity generated by PV modules is directly supplied to the pump. The pump uses this electric power to pump the water. As no backup power is available, the system pumps water during the daytime only when the solar energy is available.

Are solar water pumping systems based on photovoltaics?

The current state of system technologies, research, and the application of conventional and novel methods are presented in a review of solar water pumping systems. This publication aimed to compile studies on water pumping systems powered by solar energy with the help of photovoltaics.

What is a mathematical model of a solar inverter?

The mathematical model of the PV array, inverter/motor and controller was developed to analyze the performance under varying solar insolation and pumping head. The model was also used to analyze the performance of the motors under fluctuating voltage.

When was the first solar photovoltaic water pump invented?

The Soviet Union claimed the first solar photovoltaic water pump case in 1964. In scientific works conducted by pioneers in this field such as Lidorenko, Tarnizhevsky, and Rodichev, the main principles of solar photovoltaic pumping systems were presented [9,10,11]. The authors proposed several options for powering a motor-pump with a PV array.

Why is solar photovoltaic power a good choice for water pumping system?

Furthermore, the use of solar photovoltaic power to operate the water pumping system is the most appropriate choice because there is a natural relationship between requirement of water and the availability of solar power. SPVWPS comprises of different components, which can be grouped as mechanical, electrical and electronic components.

Can photovoltaic power be used in off-the-grid water pumping system?

In recent years, the photovoltaic (PV) power application in off-the-grid is becoming more widespread, particularly in water pumping system. These PV systems are employed widely in the fractional power range.
