Why is cable management important for ground mount solar PV arrays?

Cable Management is critical to the safety and longevity of ground mount solar PV arrays. CAB's high quality solar cable management system delivers safe, strong and durable cable support with important advantages over trenching or cable tray. on the job site. Individual CAB hangers attach to the messenger wire in less than five seconds.

What type of cable do I need for a solar array?

For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard. For ground-mounted PV installations requiring underground installations, you need an Underground Service Entrance (USE-2) cable. Are you using microinverters or string inverters for your array?

Do I need AC conductors for a ground-mounted PV array?

Since many ground-mounted PV arrays have tracking systems that use ac power to drive the tracker systems, an installer may want to install the ac conductors in the same cable support system with the dc conductors.

Where should overhead cables be installed in a PV power plant?

The NEC requires overhead cables to be installed 10 feet above finished grades or sidewalks [NEC 225.18] where accessible to unqualified people. In a large PV power plant, the perimeter fencing and security system that keeps unqualified people out of the facility is sufficient to prevent contact by unqualified persons.
