

How efficient is solar photovoltaic water pumping system?

Simulation results of SPVWPS. Based on the simulation results shown in Table 11, the designed solar photovoltaic water pumping system can meet 92.93% of the irrigation water demand of the selected site. This system efficiency is better than that in the study (81.6%) conducted by Mishra et al. [63].

What is solar photovoltaic water pumping system?

Solar photovoltaic WPS is the optimal and ideal alternative to utility grid and diesel engine operated water pumps as it offers exceptional socio-economic and environmental features . Solar photovoltaic water pumping system offers number of advantages over petrol or diesel engine operated water pumps.

How do you pump water with a photovoltaic system?

There are two methods for pumping water with a photovoltaic system: Solar energy is consumed in "real time" in the first technique, which is known as "pumping in the sun." This solution necessitates water storage in a tank (water pumped during the day is stored for later use in the evening, for example).

How a solar photovoltaic WPS is optimally designed?

In this study, SPVWPS has been optimally designed considering the water requirement, solar resources, tilt angle and orientation, losses in both systems and performance ratio. A PVSyst and SoSiT simulation tools were used to perform simulation analysis of the designed solar photovoltaic WPS.

Does water spraying over solar PV panel improve performance?

Investigation of the effect of water spraying over PV panel on the performance of SPVWPS. Overall efficiency of SPVWPS improved. Investigation of the effect of cooling solar PV panel by a thin film of water. Daily volume of water and pumping head has been reported to increase.

Can a thin film of water cool a solar PV panel?

Investigation of the effect of cooling solar PV panel by a thin film of water. Daily volume of water and pumping head has been reported to increase. Groumpos and Papageorgiou addressed the problem of optimal sizing and cost-optimization of standalone PV system (SAPS).
