

# Professional terminology for photovoltaic bracket connectors

What is a solar panel connector?

The solar panel connector is used to interconnect solar panels in PV installations. Their main task is ensuring power continuity and electricity flow throughout the whole solar array. There are many types of solar connectors in the market, but the most popular option available is the MC4 connector.

Which solar panel connector should I Choose?

Some of these include Amphenol, Tyco, Radox, and the outdated MC3 solar connector. To select the right solar panel connector for each application, installers consider different features and technical specifications.

What are the different types of Solar connectors?

There are many types of solar connectors in the market, but the most popular option available is the MC4 connector. PV technology was first invented in 1883, but the technology did not become popular until 1950 when it captured the eye of Bell Laboratories.

Which solar connector is UL & T&#220;V certified?

The SOLARLOK PV4 connector is UL and T&#220;V certified, complying with NEC regulations. The MC3 solar connector is usually considered an outdated solar connector, but it is still used in some PV applications. This connector features similar specifications to the MC4, but without any safety mechanism.

Why are solar panel connectors important?

Solar panel connectors safely lock PV wires in place while resisting harsh exposure to the elements and solar radiation for decades. This safety mechanism also reduces electrical arcing, making solar arrays safer. Another important task of solar panel connectors is reducing the electrical resistance between PV modules by properly connecting wires.

How do RADOX Solar connectors work?

Radox solar connectors are locked and unlocked by a screwing mechanism. You plug the male and female solar connectors until there is a 2 mm breach between them, then you screw them together. To disconnect them, you perform the opposite process. Solar connectors can be used to connect solar panels in series, parallel, or series-parallel.
