

Rooftop Photovoltaic Panel Consultation

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

Are rooftop solar panels safe?

Being mounted on the roof, they are safely out of reach for vandalism or theft. Cons: Rooftop solar panels cannot be integrated with just any rooftop and require an unshaded, south-facing roof for optimal performance. Despite being economical, the upfront cost of installing rooftop solar panels is still high.

What is a roof-mounted solar panel installation?

Roof-mount solar panel installations are less intrusive and invasive, and there is no need for extensive pre- and post-installation work or construction. Roof-mounted solar panels add aesthetic appeal and blend seamlessly with roofs, making them ideal for residential rooftop surfaces.

Should you choose a TPO or a rooftop solar system?

If you go with a TPO option, ask the solar company how it passes on tax credit and incentive savings to the customer. The value of a rooftop solar system depends, of course, on what you value. If your primary goal is lowering your carbon emissions, do a little research on how clean your grid electricity already is.

What if my home is not suitable for rooftop solar?

The National Renewable Energy Laboratory's SolarTRACE tool can give you a general idea of how long it may take to complete the permitting, inspection, and interconnection process in your jurisdiction. If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program.

How long does it take to install solar panels on a roof?

The quickest part of getting solar on your roof is often the installation itself, which usually takes a day or two. Once the panels are on your roof, the installer will get permission to operate (PTO) from the utility.
