

What is global photovoltaic power potential by country?

The World Bank has published the study Global Photovoltaic Power Potential by Country, which provides an aggregated and harmonized view on solar resource and the potential for development of utility-scale photovoltaic (PV) power plants from the perspective of countries and regions.

Is solar PV a good source of electricity?

The potential for clean, carbon-free electricity generation from solar photovoltaic (PV) sources in most countries dwarfs their current electricity demand. Around 20% of the global population lives in 70 countries boasting excellent conditions for solar PV.

Is solar PV a competitive source of new power generation capacity?

Solar PV is emerging as one of the most competitive sources of new power generation capacity after a decade of dramatic cost declines. A decline of 74% in total installed costs was observed between 2010 and 2018 (Figure 10).

Can a global solar PV census be used as a starting point?

We conclude that our dataset provides an initial global census of commercial-, industrial- and utility-scale solar PV installations, and can be used as a starting point for a more exhaustive, feature-rich inventory of global solar PV. See Supplementary Information for further details.

Is solar PV a strategic renewable technology?

This report clearly points out that solar PV is one of the strategic renewable technologies needed to realise the global energy transformation in line with the Paris climate goals. The technology is available now, could be deployed quickly at a large scale and is cost-competitive.

What is solar energy mapping the road ahead?

IEA 2019. All rights reserved. Solar Energy: Mapping the Road Ahead aims to provide government, industry, civil society and community stakeholders with the methodology and tools to successfully plan and implement national and regional solar energy roadmaps. This guide's holistic approach encompasses all solar technologies - solar PV, CSP and SHC.

Global map showing practical solar energy potential after excluding for physical, environmental and other factors Highlights The potential for clean, carbon-free electricity generation from solar photovoltaic (PV) sources in most countries ...
