Capacity - 5000 units, with 1 Reactor on full power it 416 Years. You can't recycle Spent Fuel, and Storage build for ever - or until patch with recycling. Yes, game has Solar Electricity. Energy storage system no response in game and you can't store energy for rainy weather. Yes, during rain efficiency of solar panels very low.

Is solargene a good game?

Solargene has an unlimited number of hours of fun and game play but there are some big learning curves that make getting started just a bit frustrating. This guide aims to get you started building a self-sufficient settlement on the Moon and all you need to support that settlement and your future colonies in the solar system.

How do I use generator power?

Add non-essential devices or those which use large amounts of power to a "Generator Power" group. Next add a switch to power on/off the items which you want to use generator power for. You can then activate generator power when you need it and run on low-power solar when you don't.

How do I get to the Moon in solargene?

once downloaded move them into the solargene save folder and open Solargene... you should now see the save inside the main menu of solargene. A Beginner's guide to getting to the Moon and setting up their first settlement. From start of your first game to settling on the Moon and having your first 20 colonists populate the Moon. Solargene h

Can I run my base on solar power alone?

If you want to run your base on solar power alone you will need to pay attention to the "Consumption" level of the base and manage the devices to keep it at a manageable level. There are ways to do that. You could add more panels (up to 20) in order to raise the output and generate more power.

Should I switch to solar power if I have a steam accumulator?

Steam backup. You can switch to solar to reduce pollution, but you'll want to keep your steam power around as a night-time backup. Steam power has priority over draining accumulators though, so you need to isolate your steam array behind a switch.
